

### Farm and Fireside.

**Wheat Seeding.**

The ground is somewhat dry for sowing wheat. Some are sowing, fearing that drier weather will follow; but more are delaying, holding for rain. My belief is that if a heavy rain comes, it is better to have the wheat sown after, and a thorough harrowing and rolling intervene between the rain and the seeding. There is a great development of plant food even in stubble, if plowed early and well cultivated until seeding time, and my experience is that it is better to get the benefit of this increased plant food than to rely on any advantages we may hope to gain from earlier seeding. Besides waiting until after a heavy rain, we do not put the seed in so deep, or run the risk of having the soil so compacted about the seed as to check the young plant. This is an evil that I and many others suffered by too early seeding last fall.
